# My first R Markdown

Sergio Alexander Torres Palomares

5/12/2020

## R Markdown basic description

With R Markdown we can write texts, articles, books or our data Reports. One of the best resources of using R Markdown is that we can **Output** our writings with different text formats like:

- *PDF*

- *LATEX*

- *WORD*

- *SLIDES*

Another important resource that is really important to identify is the acces to insert **Codes Chunks** , with this it is possible to put plots or tables made by code lines like the next one.

### *Example*

```
## [1] "Hello world"
```

```
## [1] "This is an easy code line wrote in order to demostrate"
```

```
## [1] "The use of the Code Chunk"
```

If there are questions about the use of R Markdown, a little review [1] about some basic but important line codes was inserted however, to obtain more information here http://rmarkdown.rstudio.com is the link of the official page were it can be found **tutorials**, **lessons** or **books**.

**[1] Important R Markdown Line Codes**

- *Bold*
- **Italics**
